Dear Minister McKenna,

I do NOT support oil and gas exploration occurring within Sable Island National Park Reserve. Or anywhere else in Canada.

In what universe do humans in power think that any exploration on the part of the Atlantic that is called the graveyard of the Atlantic due to the storms and sunken vessels would be a good spot to drill. Must be greed. If a 10 year old understands the stupidity of drilling for oil or any other natural gas in the water currents around Sable Island as any spillage would ruin the fish and water around the world, and that same 10 year old can understand it is wrong and shouldn't be even considered but yet asks why people like you in power can not understand it, it must be greed. How are you looking out for our future generations? That same 10 year old talks about the importance of protecting the water as they understand without it they can not live, but wonder why our "leaders" can't understand it. A country the size of Canada with a population so small can not keep killing the rest of the planet with their stupid decisions to keep extracting oil from the planet. The Science all tells us we need to move off fossil fuels listen for crying out loud. Mother Nature is the original mother of the #metoo movement she has been [REDACTED] long enough. I would really like my child to be able to grow up but if the people like you keep allowing the greed to [REDACTED] our environment we are all going to seize to survive.

Kate
